Empire Pool Covers uses PCS Products

Known as the "industry innovators," for two decades, Pool Cover Specialists has defined state-of-the-art technology in the swimming pool cover industry. PCS's latest advances include; the fastest and most powerful (waterproof) motor ever used to power an automatic pool cover, "touchpad controls" (standard on every system), and zero-maintenance drive systems - all backed by warranties that exceed those of every other manufacturer in the industry.

Swimming Pool Peace Of Mind There is no disputing that swimming pool ownership brings good times, recreation, relaxation and splendor to your life. All this is made better by you knowing your pool is safe for children and pets 24 hours a day, every day. While there is no substitute for proper supervision our pool cover systems provide year round protection and safety when you are not around for your peace of mind.

Sometimes referred to as "horizontal fences," automatic pool cover systems isolate the water, not the pool deck or backyard like conventional fences do. And a PCS pool cover system supports the weight of several adults, providing more barrier protection than any other pool-safety device.

Savings From Your Automatic Cover

Your pool cover will pay for itself with the savings from a decrease in chemical use, reduced maintenance, solar heating, energy conservaton & elimination of evaporation.

Creative Pool Cover Solutions

A swimming pool cover no longer has to detract from the elegance of your pool environment. Thanks to innovative track and housing designs pioneered by PCS, when retracted, the pool cover all but disappears! And PCS systems do not inhibit water features, negative edges, raised walls, zero-entries, freeform designs or other pool features.
